Cascade Spacers Set

GETTING STARTED - FULL PAGE CASCADE

There are many creative ways to use the Cascade Spacers Set, but we recommend starting with a cascade that spans an entire 12x12 page to get the most of your layout. Use the steps below to help get you started!

**Select your Peekaboo Pocket size and quantity using the guides on the next two pages.**

1. **Choose your spacer.** Scan the QR code on the packaging or refer to the guides on the next two pages to see which spacer corresponds to your Peekaboo Pocket size and quantity. Locate the matching spacer in your set.

2. **Adhere your first Peekaboo Pocket along the left edge of the clear top-loading pocket, with the tab folded behind the Peekaboo Pocket, adhesive side down.**

   If you're working with a plain page, position the first Peekaboo Pocket directly on the page. With the Peekaboo Pocket folded out, apply your base paper to the page, covering the adhesive strip from the Peekaboo Pocket. Then slip the Page P rotector over the page before continuing to the next step. Additional Peekaboo Pockets will be adhered directly onto the protector.

3. **Position the spacer.** With the Peekaboo Pocket open, place the spacer inside the fold. Align the top "T" portion of the spacer with the top edge of the Peekaboo Pocket.

   If you're not aligning your Peekaboo Pockets with the top or bottom edge of the page, use the ruler on the spacer to position your first pocket, and the "T" at the top to keep it perfectly square.
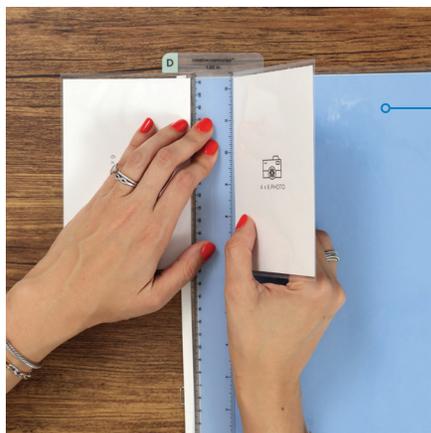

4. **Build the cascade.** Place the outside folded edge of the Peekaboo Pocket flush against the spacer with the adhesive strip folded back. Remove the spacer, open the pocket and firmly adhere to the page. Repeat the spacer placement process across the page to create an even, consistent cascade.
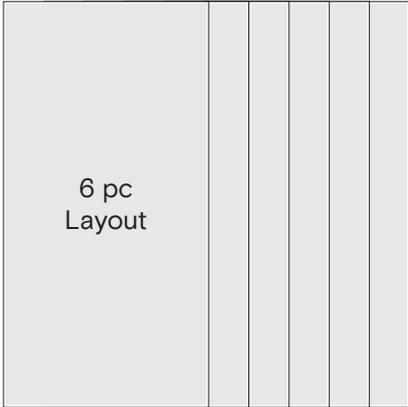

Check out the instructional video for a full walk-through of the steps above!
